Contract Seating, Components & Furniture Services

Environmental Commitment

Intellisit realizes the importance of protecting the environment and works hard with our suppliers to minimize any effect we might have on it.

Wood Products

Intellisit uses wood product suppliers that promote the highest industry standards to ensure the sustainability of managed forest lands. We work with Companies who acknowledge all of the recognized forest certification organizations (i.e. Forest Stewardship Council FSC and others.) These Companies also adhere to industry standards for their wood procurement practices from private landowners and other suppliers.

All plywood utilizes Phenolic resins in the manufacturing process which release less than 0.1 parts per million (ppm) of Formaldehyde. This very small amount is the same as what is always present in the outdoor air from the combustion of wood and other organic compounds, plus what is present naturally in many foods and cells in the human body.

Foam Products

All foam utilized in Intellisit seating utilizes a water-blown formula that includes a blend of natural oil based and conventional Polyol. The use of Polyol made partially from natural plant based renewable oils such as soy bean and castor bean helps the environment by reducing the use of fossil fuel resources which contribute to warming emissions.

The polyurethane foam utilized in our products is independently laboratory tested and certified by CertiPUR-US to meet standards for content, emission and durability. CertiPUR-US approved foams are made without PBDE's (Chemical ethers), mercury, lead, heavy metals, formaldehyde and phthalates. The foam does not produce measurable volatile organic compounds (VOCs) and ozone depleting substances.

Factory Operations

From management to the production floor, employees at Intellisit demonstrate an ongoing commitment to finding ways to eliminate waste, pollutants, and materials usage. We are constantly evaluating the best manufacturing processes and suppliers that employ the most effective solutions for our environmental commitment.
